

1. Interview Version (60–90 seconds)

My name is Deepesh Navani, and I'm currently in my final year of Computer Engineering. My primary focus has been Full Stack Development, where I've worked on building web and mobile applications and understanding how different parts of an application work together. More recently, I've developed an interest in AI/ML, particularly exploring concepts like RAG and fine-tuning to understand how AI can be applied to real-world problems. I also practice DSA to improve my problem-solving and logical thinking skills.

From a technical perspective, I work with React.js, Next.js, and React Native on the frontend, and Node.js and Express.js on the backend. I've also worked with both SQL and NoSQL technologies, including MongoDB and Supabase. Through my projects, I've gained hands-on experience in developing complete applications, designing APIs, working with databases, and integrating AI-powered functionality.

Apart from academics and technology, I enjoy playing cricket and badminton, going to the gym, and watching movies occasionally. These activities help me maintain a good balance and stay refreshed.

Overall, I'm someone who enjoys learning new technologies, building practical solutions, and continuously improving my technical skills. Thank you.

2. Short Formal Version (20–30 seconds)

Hi, I'm Deepesh Navani, a final year Computer Engineering student with a strong interest in Full Stack Development. I have experience building web and mobile applications using React.js, Next.js, React Native, Node.js, and Express.js, and recently I've also started learning AI, Machine Learning, and Django. I'm passionate about learning new technologies, solving real-world problems, and continuously improving my technical skills.

1. Walk Me Through Your Resume

Why do interviewers ask this?

They want to understand your journey, what you have done so far, and whether your experience matches the role.

Answer

I started my journey with a Diploma in Computer Engineering, where I developed a strong interest in software development. During my diploma, I worked on projects that helped me learn new technologies like React Native and Firebase.

Currently, I'm pursuing my Bachelor's in Computer Engineering. Over the last few years, I have mainly focused on Full Stack Development using React.js, Next.js, Node.js, Express.js, SQL, MongoDB, and Supabase. Recently, I also started learning AI, Machine Learning, and Django while building AI-powered features using the Gemini API. Along with academics, internships and projects have helped me gain practical experience.

Common Mistakes

- Reading the resume line by line.
- Explaining every small detail.
- Taking more than 2 minutes.

Confidence Tip

Explain your journey like a story.

2. Tell Me Something That Is NOT Mentioned In Your Resume

Why do interviewers ask this?

They want to know you beyond your resume.

Answer

One thing that is not clearly mentioned in my resume is that I have recently started stepping out of my comfort zone. Earlier, I didn't participate much in hackathons because I focused mostly on improving my technical skills. Now, I actively participate because I believe they help me improve teamwork, communication, and problem-solving under time pressure.

Common Mistakes

- Sharing personal problems.
- Saying "Nothing."

Confidence Tip

Talk about your growth.

3. Why Should We Hire You?

Why do interviewers ask this?

They want to know what value you can bring to the team.

Answer

I believe I have a good balance of technical skills and a learning mindset. I have worked on full-stack projects, internships, and recently started exploring AI technologies as well. Whenever I face a new technology, I don't avoid it. I learn it and apply it in my projects. I also take ownership of my work and try my best to complete every task with quality. I may not know everything today, but I'm confident that I can learn quickly and contribute to the team.

Common Mistakes

- Saying "I'm the best."
- Comparing yourself with others.

Confidence Tip

Focus on your strengths instead of proving others wrong.

4. Why Are You Interested In This Role?

Why do interviewers ask this?

They want to know if your interests match the role.

Answer

I'm interested in this role because it matches what I have been learning and building over the last few years. I enjoy developing applications, solving real-world problems, and learning new technologies. This role will give me an opportunity to apply my technical skills while continuing to grow as a software engineer.

Common Mistakes

- Talking only about salary.
- Giving a generic answer.

Confidence Tip

Connect your projects with the role.

5. What Are Your Strengths?

Why do interviewers ask this?

They want to know your positive qualities.

Answer

One of my biggest strengths is that I don't give up easily. Whenever I face a problem, I try different approaches until I find a solution. Another strength is my willingness to learn. During my projects, I have learned completely new technologies whenever required instead of avoiding them. I also take responsibility for my work and like completing tasks properly.

Common Mistakes

- Listing too many strengths.
- Giving examples without proof.

Confidence Tip

Mention only two or three strengths.

6. What Are Your Weaknesses?

Why do interviewers ask this?

They want to know whether you are self-aware and improving yourself.

Answer

One area I'm still improving is my communication skills. During my college years, I spent most of my time learning technical skills and building projects, so I didn't focus enough on communication. Over the past few months, I have been practicing through mock interviews, explaining my projects more clearly, and speaking more confidently. I have already seen good improvement, and I continue working on it.

Common Mistakes

- Saying "I have no weakness."
- Mentioning a weakness that affects the job directly.

Confidence Tip

Always show improvement.

7. Tell Me About Your Biggest Achievement

Why do interviewers ask this?

They want to know what you are proud of.

Answer

One achievement I'm proud of is building projects that helped me learn completely new technologies while solving real problems. Whenever I worked on a project, I focused on understanding the technology instead of just completing the task. Seeing those projects work successfully after learning everything from scratch gave me a lot of confidence and motivated me to keep improving.

Common Mistakes

- Talking only about marks.
- Exaggerating achievements.

Confidence Tip

Focus on learning and impact.

8. Tell Me About A Failure

Why do interviewers ask this?

They want to know how you handle setbacks.

Answer

During a hackathon, our team had completed the project, but just before the final presentation, one of our team members accidentally pushed changes that caused the project to stop working. Thankfully, the judges mainly evaluated our idea and presentation, so we were still able to explain our solution. That experience taught me the importance of keeping backups, testing before making final changes, and following a proper Git workflow instead of making last-minute updates.

Common Mistakes

- Blaming teammates.
- Saying you never failed.

Confidence Tip

Spend more time explaining the lesson than the failure.

9. Tell Me About A Challenge You Faced

Why do interviewers ask this?

They want to know how you solve difficult problems.

Answer

During my diploma final year project, we decided to build the application using React Native and Firebase, but none of us had worked with those technologies before. Instead of changing the project, I started learning them from scratch. I completed the frontend first, understood how everything worked, and then helped my teammates connect the backend and finish the application. It was challenging, but it taught me that learning quickly and staying consistent can solve difficult problems.

Common Mistakes

- Choosing a very small challenge.
- Saying everything was easy.

Confidence Tip

Explain the problem, your action, and the result.

10. Tell Me About A Time You Took Ownership

Why do interviewers ask this?

They want to know whether you take responsibility.

Answer

During my diploma final year project, everyone was new to React Native and Firebase. Instead of waiting for someone else to start, I began learning the technologies on my own and completed the frontend of the application. Once I understood the workflow, I helped my teammates connect the backend and complete the remaining work. I stayed involved until the project was successfully finished. This experience taught me that taking ownership means helping the team move forward instead of waiting for instructions.

Common Mistakes

- Saying "I did everything myself."
- Ignoring your teammates' contribution.

Confidence Tip

Show responsibility, not ego.

11. Tell Me About A Mistake You Made

Why do interviewers ask this?

They want to know whether you learn from your mistakes.

Answer

One mistake I learned from happened during a hackathon. Near the end of the event, our project stopped working because of a Git-related issue after a final push. Even though it wasn't only my mistake, I realized that the whole team should verify changes before making final updates. Since then, I have become more careful with version control, backups, and testing before presentations or deployments.

Common Mistakes

- Blaming others completely.
- Choosing a mistake that shows carelessness.

Confidence Tip

Show what changed after the mistake.

12. How Do You Handle Pressure?

Why do interviewers ask this?

They want to know whether you stay calm during deadlines.

Answer

I usually stay calm and break the work into smaller tasks instead of thinking about everything at once. During my diploma project, we had to learn new technologies while completing the project before the submission deadline. Instead of getting stressed, I focused on learning step by step, completed one module at a time, and kept helping the team. This approach helped us finish the project successfully.

Common Mistakes

- Saying you never feel pressure.
- Saying you panic.

Confidence Tip

Talk about your process.

13. How Do You Manage Your Time?

Why do interviewers ask this?

They want to know whether you can balance multiple tasks.

Answer

I usually plan my work before starting. If I have multiple tasks, I divide them into smaller parts and complete the important ones first. During college, I managed academics, projects, internship work, and DSA practice by following a simple daily plan. This helped me stay organized and complete my work on time.

Common Mistakes

- Giving a very general answer.
- Saying you never make plans.

Confidence Tip

Use real examples.

14. What Motivates You?

Why do interviewers ask this?

They want to understand what keeps you working.

Answer

I enjoy learning new technologies and seeing my ideas become real applications. Whenever I build something that solves a problem or learn a technology that I didn't know before, it motivates me to keep improving. Every completed project gives me more confidence to take on bigger challenges.

Common Mistakes

- Saying only money.
- Giving very generic answers.

Confidence Tip

Talk about learning and growth.

15. What Makes You Different From Other Candidates?

Why do interviewers ask this?

They want to know your unique strengths.

Answer

I think one thing that makes me different is my willingness to learn. If I don't know a technology, I don't avoid it. I learn it and try to apply it in real projects. During my projects, I have worked with different technologies like React, React Native, Node.js, SQL, MongoDB, Supabase, and recently started learning AI and Machine Learning. I believe this learning mindset helps me adapt quickly and continue improving.

Common Mistakes

- Saying you're better than everyone else.
- Speaking without examples.

Confidence Tip

Be confident but humble.

16. Why Should We NOT Hire You?

Why do interviewers ask this?

They want to see whether you are honest and aware of your areas of improvement.

Answer

I don't think there is a strong reason not to hire me. I may not know every technology or tool today, but I'm always ready to learn. Whenever I face something new, I spend time understanding it and try to apply it in my work. I believe a positive attitude, willingness to learn, and consistency are more important than knowing everything from the beginning.

Common Mistakes

- Saying "There is no reason."
- Mentioning a serious weakness.

Confidence Tip

Stay honest and end on a positive note.

17. What Are Your Short-Term Goals?

Why do interviewers ask this?

They want to know what you want to achieve in the next few years.

Answer

My short-term goal is to become a skilled software engineer by improving my technical knowledge and gaining practical experience. I want to work on real projects, learn from experienced teammates, and improve my development skills. I also want to strengthen my knowledge in AI and Machine Learning while becoming better at problem-solving.

Common Mistakes

- Giving unrealistic goals.
- Talking only about salary.

Confidence Tip

Keep your goals practical.

18. What Are Your Long-Term Goals?

Why do interviewers ask this?

They want to know whether you have a clear career direction.

Answer

My long-term goal is to become a reliable software engineer who can handle complete projects from planning to deployment. I also want to build expertise in Full Stack Development and AI so that I can work on impactful products. As I gain experience, I would like to take more responsibility and help junior developers as well.

Common Mistakes

- Saying you want to leave after two years.
- Giving unrealistic answers.

Confidence Tip

Show that you want long-term growth.

19. Where Do You See Yourself In 5 Years?

Why do interviewers ask this?

They want to know your future vision.

Answer

In five years, I see myself as a confident software engineer who can independently handle important projects and contribute to business goals. I hope to improve both my technical and communication skills, continue learning new technologies, and become someone my team can depend on.

Common Mistakes

- Saying "I don't know."
- Talking only about job titles.

Confidence Tip

Focus on skills and growth.

20. Are You Willing To Relocate?

Why do interviewers ask this?

They want to know whether you are flexible.

Answer

Yes, I'm willing to relocate if the job requires it. My first preference would be Mumbai because it is my hometown, but I understand that business requirements are important. I'm comfortable moving to another city if it gives me an opportunity to learn and contribute.

Common Mistakes

- Giving unclear answers.
- Saying "Only my city."

Confidence Tip

Show flexibility.

21. Are You Comfortable Working Under Deadlines?

Why do interviewers ask this?

They want to know whether you can deliver work on time.

Answer

Yes. I understand that deadlines are a part of every software project. Whenever I have multiple tasks, I divide them into smaller parts and complete the important work first. During my diploma project, we had limited time while learning new technologies, but by planning properly and working consistently, we completed the project successfully.

Common Mistakes

- Saying deadlines never affect you.
- Giving no example.

Confidence Tip

Mention planning.

22. Are You Willing To Learn New Technologies?

Why do interviewers ask this?

They want to know whether you can adapt.

Answer

Yes, definitely. In fact, most of my learning has happened this way. During my diploma project, I learned React Native and Firebase from scratch. Recently, I also started learning AI, Machine Learning, and Django because I wanted to explore new technologies. I enjoy learning because technology changes very quickly, and continuous learning helps us stay relevant.

Common Mistakes

- Giving one-line answers.
- Saying you only want to work on one technology.

Confidence Tip

Use your own examples.

23. How Do You Handle Criticism?

Why do interviewers ask this?

They want to know whether you accept feedback.

Answer

I see criticism as an opportunity to improve. If someone points out a mistake in my work, I first try to understand what went wrong instead of getting defensive. During projects and internships, feedback helped me write better code and improve my communication. I believe listening carefully and improving is much more important than trying to prove that I'm always right.

Common Mistakes

- Saying you never get criticized.
- Becoming emotional.

Confidence Tip

Show maturity.

24. What Would Your Friends Or Teammates Say About You?

Why do interviewers ask this?

They want to know how others see you.

Answer

I think my friends and teammates would say that I'm dependable and calm during work. If we face a problem, I usually try to find a solution instead of panicking. They would also say that I'm willing to learn new things and help whenever needed. I like completing my responsibilities properly and supporting the team whenever possible.

Common Mistakes

- Overpraising yourself.
- Saying unrealistic things.

Confidence Tip

Keep it believable.

25. What Kind Of Work Environment Do You Like?

Why do interviewers ask this?

They want to know whether you'll fit into the team.

Answer

I like a work environment where people support each other and are open to learning. I enjoy working with teammates who share ideas, give constructive feedback, and solve problems together. I also like environments where I can learn new technologies and take on challenging tasks because they help me grow.

Common Mistakes

- Saying you only like working alone.
- Being too demanding.

Confidence Tip

Show that you can adapt.

26. If You Don't Know Something, What Will You Do?

Why do interviewers ask this?

They want to know your approach to learning.

Answer

If I don't know something, I first try to understand the problem by reading documentation or reliable resources. If I still need help, I won't hesitate to ask my teammates or seniors after making my own effort. I believe asking questions after trying to solve the problem is a good way to learn and improve.

Common Mistakes

- Saying you'll immediately ask someone.
- Saying you'll guess.

Confidence Tip

Show curiosity and responsibility.

27. Why Do You Want To Work In Software Development?

Why do interviewers ask this?

They want to understand your interest in the field.

Answer

I enjoy software development because I like solving problems and building applications that people can actually use. Every project teaches me something new, whether it's a framework,

a database, or an API. Seeing an idea become a working application gives me satisfaction, and that's one of the main reasons I want to build my career in software development.

Common Mistakes

- Saying only "Good salary."
- Giving a generic answer.

Confidence Tip

Talk about your interest in building products.

28. Do You Have Any Questions For Us?

Why do interviewers ask this?

They want to know whether you're interested in the role.

Answer

Yes, I have a few questions.

- What does a typical day look like for someone in this role?
- What technologies does the team mainly use?
- What kind of learning opportunities are available for freshers?
- How is performance usually evaluated?
- What qualities do your best employees have?

Common Mistakes

- Saying "No questions."
- Asking about leave or salary in the first interview.

Confidence Tip

Ask 2–3 meaningful questions.

29. Is There Anything Else You Want Us To Know About You?

Why do interviewers ask this?

They want to give you one final opportunity to leave a positive impression.

Answer

I would just like to say that I'm someone who genuinely enjoys learning and improving. I know that I'm still at the beginning of my career, but I'm willing to work hard, learn from experienced people, and take responsibility for my work. If I get an opportunity, I'll give my best and continue growing both technically and professionally.

Common Mistakes

- Repeating your entire introduction.
- Saying "Nothing."

Confidence Tip

End with confidence and gratitude.
